

Tourist Superior Class - Galapagos Yachts

Nemo II - YACHT

ITINERARY DAY BY DAY

Itinerary South B4 4 days / 3 nights

DAY 1-THURSDAY

AM: Santa Cruz, Charles Darwin Research Station – dry landing

Activities: hiking

The main visit in Puerto Ayora is to the Charles Darwin Scientific Station. An excellent way to begin learning about the islands and their origin and formation is to visit the Station. You can also see how the Galapagos turtles are raised and meet Jorge, the famous solitary turtle. The Scientific Station has its own beach that receives many visitors on weekends.

Dinner and Navigation to Floreana

DAY 2-FRIDAY

Floreana Island, Punta Cormorant, Champion Point, Baroness Viewpoint – wet landing

Activities: hiking, kayaking, panga explorations

The visit to Punta Cormorant offers two contrasting beaches. Arriving on shore you will encounter a green sand beach (the green sand is caused by the olivine crystals derived silicates or magnesium and iron) from here you will follow the trail leading to a lagoon where Pink Flamingoes and other shore birds can be seen in the distance making their home. Looking into the mud of the lagoon there appears to be 'cracks' in the mud. These cracks are not caused from dryness but are actually the footpaths of flamingos. This is also a good spot for seeing Large-Billed Flycatchers, Small-Ground Finches, Medium-Ground Finches or Cactus Finches. The walk continues to another beach on the other side made of fine white sand particles known as "Flour Beach". In the waters Ghost Crabs and Rays can be seen swimming. Time permitting you may even go for a swim. Go on a panga ride at Champion Point and kayaking at Baroness Viewpoint.

PM: Floreana Island, Post Office Bay – wet landing

Activities: hiking, snorkeling

In 1793 British whalers established the Post Office Barrel to send letters to and from England. This tradition has continued over the years, and even today visitors may drop off and pick up letters, without stamps, to be carried to far destinations. This is one of the few visitor sites, that is visited for its human history. Whaling Captain James Colnett established the wooden post barrel in the early 1793. At the time whaling was a big industry, ships were typically gone for 2 years at a time. The Galapagos Islands were a frequent stop for these ships. Outbound ships would drop off letters after rounding the cape and the ships returning home would mail them. Over the years thousands of ships have stopped to send and receive mail at Post Office Bay. Many have posted a sign of driftwood or other materials memorializing their visit. This is the only area in the Galapagos where graffiti is still acceptable.

Arriving at Post Office Bay you will land on a brown sand beach, passing the sea lions lying in the sun. At the post barrel the guide will pull a hand full of letters for the group. Continuing the tradition, the letters are brought home with the traveler and then mailed to the addressee. Visitors also have the opportunity to send letters of their own. There is also the remains of a Norwegian Fishing Village a commercial fishing operation established in 1926 and abandoned a couple of years later. The group of Norwegians arrived with dreams of riches started a fishing and can operation on \$900 each. The tough Galapagos life and a few misfortunes had them abandon their dreams.

DAY 3 - SATURDAY

AM: Bartholome Island – dry landing

Activities: hiking, panga explorations

Desolate island with few plants is the most visited and most photographed island in the Galapagos. The island consists of an extinct volcano and a variety of red, orange, green, and glistening black volcanic formations. The best known of the island's features is the Tuff Cone known as Pinnacle Rock. This large black partially eroded lava formation was created when magma expelled from the volcano reached the sea. When the seawaters cooled the hot lava it caused an explosion. The exploded particles eventually fasten together forming a rock composed of thin layers. Bartolome's Pinnacle Rock has become one of the best recognized and most photographed sights in the islands. A prominent sight it was used as a target for US airmen during WWII. Lying beside the Pinnacle Rock are twin half-moon shaped beaches.

The northern beach is a popular snorkeling site where visitors have the opportunity to swim with fish, Sea Lions and Galapagos Penguins. Much larger animals can be found near the southern beach including stingrays, spotted eagle rays, white-tipped sharks, and black-tipped sharks. Little vegetation grows in this barren place. Mangroves border the beach and the small shrub *Tiguilia* grows in the volcanic sands. The seeds and tiny white flowers of the *Chamaesyca* provide food for the island's finch. These plants are common to arid regions and are able to survive in these harsh volcanic conditions.

PM: Chinese Hat – wet landing

Activities: hiking, snorkeling

Visit to Sombrero Chino, a tiny island just off the southeast tip of Santiago. Its name (Chinese Hat) describes the island's shape. Those visitors who travel to the island will find its special landscape worth the visit. Though centrally located it is one of the least visited sites in the area. National Park Service restrictions have limited the number of visitors to Sombrero Chino. Multi-day cruises with 12 passengers or less are the only ones permitted at this site. The landing is on a beautiful crescent-shaped white sand beach, home to Sea Lions and Sally Lightfoot Crabs. The trail on Sombrero Chino's explores its volcanic origin, one of the most evident in the islands.

The lava rock is very fragile and tends to break off when people walk over it. The sharp outcroppings caused from these breaks make it necessary to bring good shoes. Patches of Pahoehoe Lava, cracked lava and lava tubes can be found on the island. While the path does not lead up the striking red rust sides of the Sombrero to the caldera, it does venture high enough on the island to offer some spectacular views of the waves crashing below. Snorkeling in the waters near Sombrero Chino can create a stir; white-tipped sharks frequent the area, as do the playful Galapagos Penguins and Sea Lions.

Dinner. Really early in the morning about 4 a.m. navigation to Caleta

DAY 4 - SUNDAY

AM: Santa Cruz, Black Turtle Cove – no landing

Activities: panga explorations

In the morning, panga ride in Caleta Tortuga, also known as Black Turtle Cove, It is on the north side of Santa Cruz. You have to go by panga (motorized canoe) to reach it and see its mangrove swamp where there are nesting marine turtles during certain seasons of the year, and also sharks and rays.

AM: Baltra Island, Transfer to the Airport

Be assisted to Baltra airport for your flight to Ecuador.

Rate includes:

- All meals (breakfast - lunch - dinner) water with meals.
- Accommodation in double cabins.
- Transfers from the airport to the yacht and vice versa in Galapagos.
- Excursions in the islands with English Speaking Naturalist Guide.
- **Air ticket.**

Rate does not include:

- Galapagos National Park Entrance Fee: USD 100.00 per person.
- Migratory Control Card: USD 20.00 per person.
- Soft drinks and alcoholic beverages.
- Snorkelling equipment for rent on board.
- Tips.

Note:

- Rates per person in U.S. Dollars.
- Single occupancy supplement 80% or 100%.
- The route of the ship and the itinerary are subject to change and can vary depending on the regulations and policies of the Galapagos National Park, weather, seasonal changes, safety, etc.
